Like you, our greatest concern is the well being of your pet. Your pet is scheduled for anesthesia and/or surgery. Before putting your pet under anesthesia, we will perform a full physical examination. However, we recommend a pre-anesthetic blood profile to be performed in order that we may maximize patient safety and alert the doctor to the presence of dehydration, diabetes and/or kidney or liver disease which could complicate the procedure. These conditions may not be detected unless a pre-anesthetic profile is performed. State of the art equipment enables us to perform the pre-anesthetic blood profile within the clinic and we are committed to making this technology available to your pet. These tests are similar to those your own physician would run were you to undergo anesthesia. In addition, the results of these tests may be useful later to develop faster, more accurate diagnosis and treatments in the event that your pet's health changes.
